

Advancing Health Care Equity

Fully-integrated
multi-disciplinary
experiential curriculum

Who should participate?

Future health professionals

Future policy makers

Future educators

Current and future health advocates

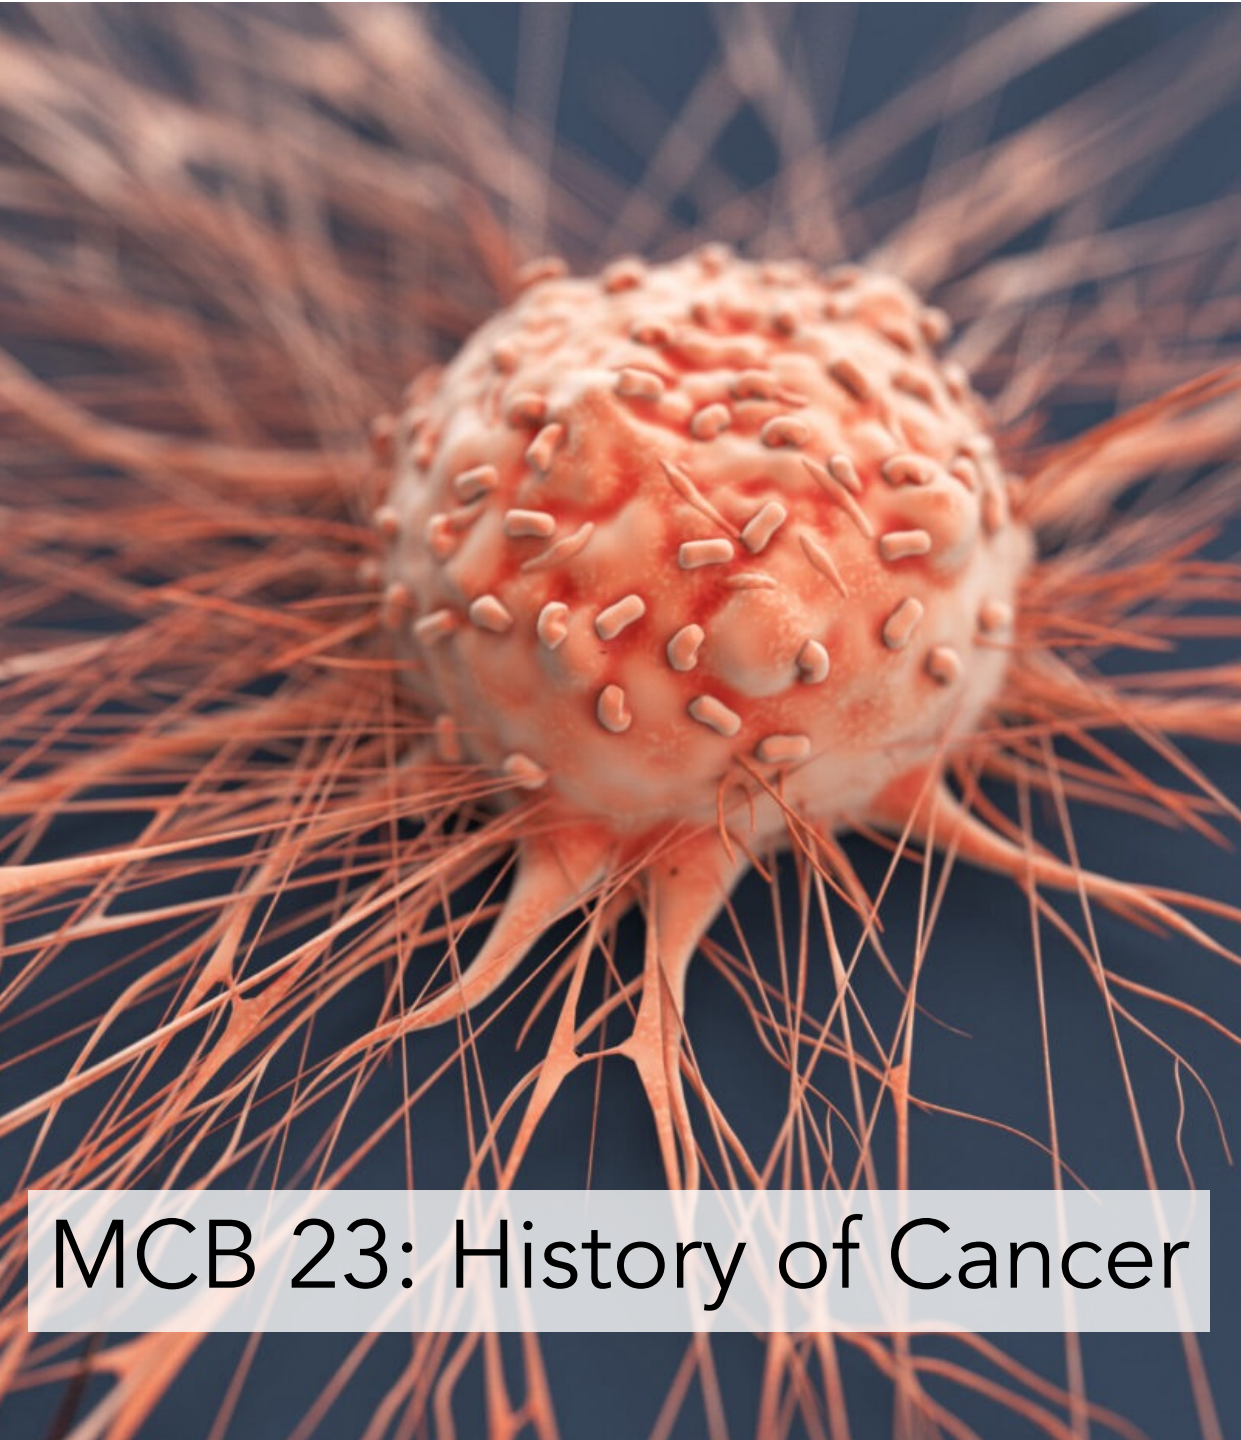

What will I do?

Coursework

Speaker series

Internship

Lab

MCB 23: History of Cancer

Prof. Marina Crowder

RST 152: Justice, Equity,
and Privacy in
Medical Humanities

Prof. Meaghan O'Keefe

STS 115: Data Sense and Exploration

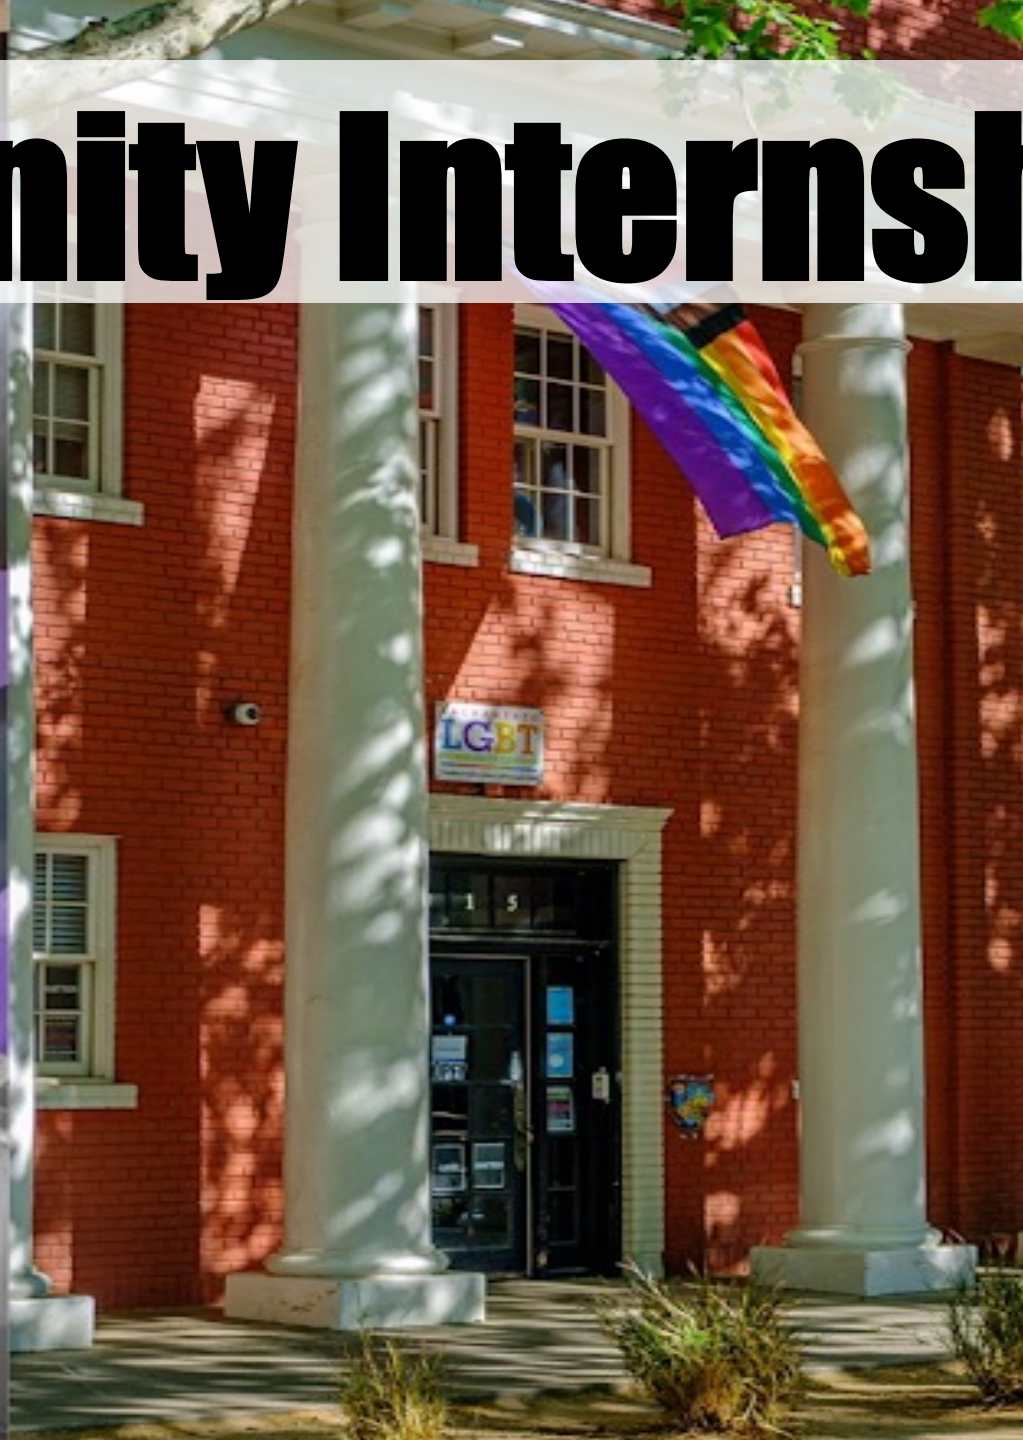

Prof. Emily Merchant

Speaker Series

Community Internships

Health Equity Lab

Weekly Schedule

	TUES	THURS
9:00-10:20	MCB 23	
10:30-11:50	STS 115	
12:10-3:00	Speaker/ Lunch	Lunch/ Lab
3:10-4:30	RST 152	

What will I get?

19 units (OL, WE, DD)

Internship experience

Small cohort

Dedicated faculty

Build your career

Make a difference

Student Perspective

Advancing Health Care Equity

Quarter at Aggie Square • Experiences • [Advancing Health Care Equity](#)

Advancing Health Care Equity

Inequities in healthcare delivery mean that many who most need health care cannot access it. To become health care professionals who are also agents for the improvement of health outcomes for all, students need to be well-versed in the sociocultural and historical factors that influence health care and the social, economic, and political systems through which it is delivered.

This Quarter at Aggie Square experience will prepare students to promote social equity and justice in health care, whether as providers, advocates, or policymakers. Students will receive a strong foundation in pressing areas of challenge and change in health care: medical technologies, data analysis, privacy, cultural sensitivity, equity, and access to care. Through courses in Science and Technology Studies and Religious Studies, a community internship, and a public lecture series, students will learn to understand the role of history, social institutions, and power dynamics in shaping our current healthcare system, and begin to consider new solutions. [Learn more.](#)

Caring for people as a medical professional is a tangible way to contribute to individuals' well-being, but only if those individuals have access to care. The benefits of the last 150 years of medical innovation have not been distributed equitably.

Who should take this experience?

Students interested in careers that promote social equity and justice in health care, whether as providers, advocates, or policy makers. This program will provide credit toward degrees in Science and Technology Studies (8 units) and Religious Studies (8 units) and (Molecular cell Biology) (3 units).

Offered Winter 2023
